

▶ ProjX™

Enterprise Project Tracking for Corporate Process Improvement Initiatives

Companies are turning to ProjX™ as the complete end-to-end web-based solution for managing and tracking the success of their process excellence programs.

ProjX is a comprehensive reporting and management system that helps companies track, monitor and illustrate the success of performance excellence deployments. Delivered via the web, ProjX extends beyond traditional project management systems by unifying Six Sigma, Lean and other performance improvement methodologies with knowledge management, project reporting and tracking tools. ProjX is fully configurable to support your company's specific process improvement roadmap.

How ProjX can help your organization:

Centralized Project Management - ProjX centralizes performance excellence project management with a flexible, web-based interface that allows project leaders and process excellence program practitioners to access real-time data anytime, from anywhere in the world. By eliminating the confusion and duplication associated with disparate databases and tracking systems, ProjX helps project leaders work more efficiently, ultimately resulting in greater program profitability and lower deployment costs.

Real-time Reporting - ProjX's forecasting and reporting tools significantly reduce the amount of time project leaders spend generating reports, freeing them up to focus on what they do best – driving organizational improvements. Users can choose from several project report formats, including Microsoft PowerPoint, to create report-outs without rework. At the program level, ProjX provides many comprehensive and graphical reports that have the power to enhance the visibility of your organization's entire performance excellence program, which in turn helps deployment leaders gain stronger support from senior executives.

Financial Validation - ProjX makes it simple to demonstrate financial results from your process excellence program efforts. Its financial matrix can be configured for your needs to complement your existing financial processes. Whether the goal is to see forecasted or actual savings, or to calculate different variables by month or by year, ProjX is up to the task. It provides instant access to real-time validated financial data, helping highlight project successes and facilitate data-driven decision making.

AT A GLANCE

What is ProjX?

ProjX is a web-based end-to-end solution for process improvement project management.

Who should use ProjX?

Any organization that wants to increase the efficacy of its performance excellence programs, better track financial results and streamline project management.

How is ProjX Delivered?

ProjX is a web-based tool accessible with a login from any computer with an internet connection.

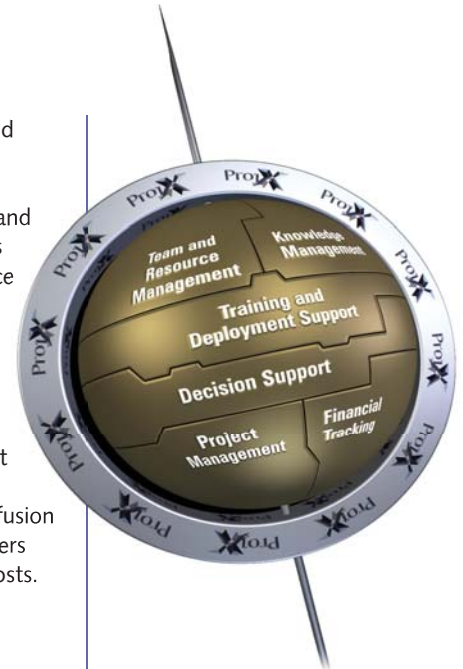

Who Benefits from ProjX?

Every member of the performance excellence team: executives, Champions, Black Belts, Master Black Belts, Green Belts, finance representatives and others.

Knowledge Sharing and Success Replication - ProjX dramatically simplifies the process of sharing information across the enterprise. Its collaborative work environment features a centralized, searchable knowledge base that allows users to access past and current project details, giving them the power to identify best practice projects and replicate successes across the organization. In addition, projects can be linked to strategic corporate goals or specific performance excellence initiatives. And, new project ideas can be submitted from within, or even outside of, the organization and then prioritized based on a company-specified matrix.

Team and Resource Management - ProjX provides employees with a bird's eye view of the performance improvement community, helping companies manage their human resources so they can deploy resources effectively, and on a global basis, if necessary. ProjX's utilization and training certification reports help you place the right individuals on the right projects at the

What ProjX Delivers

- Complete Project Tracking & Management
- Detailed Team & Resource Management
- Robust Knowledge & Document Management
- Comprehensive Real-Time Reporting & Forecasting

ProjX™

right time. Ad hoc team members can be added by project owners, giving them a wide range of expertise to draw upon.

Integrated eLearning Infrastructure - ProjX has integrated a number of elearning tools directly into the system to help reinforce training. BMG's online eLearning courses, as well as your organization's own materials, can be linked via the ProjX Mentor, providing just-in-time training lectures, resources, templates and examples in a project-based context. Access to your Process Excellence eHandbook can also be provided from ProjX to encourage the accurate use of Six Sigma tools.

Who Needs ProjX?

ProjX is invaluable to employees at multiple levels within an organization to improve deliverable management and project reporting.

Executives - ProjX dashboards and real-time reporting functions help executives monitor progress, forecast savings and track financial results.

Champions and Master Black Belts - ProjX helps Champions and MBBs actively manage the performance excellence community, review project status and details, and communicate progress and results to team members.

Financial Representatives - ProjX provides real-time financial reporting features to help finance representatives assess project value, and track estimated and actual savings with ease.

Black Belts and Project Owners - ProjX tools and templates relieve these project leaders from time-consuming manual input tasks associated with project review and financial tracking, allowing them to spend their time focusing on results.

THREE REASONS WHY ProjX™ is the right solution for your Performance Excellence Program

1) Fully Configurable and Scalable

We provide a configurable software solution to match your exact needs and scale with your growth. Whether your focus is Six Sigma, Lean, DFSS or another methodology, ProjX can provide customized roadmaps, financials and reporting to help your projects succeed and your project owners maximize savings. ProjX is designed to be scalable, supporting single-site companies as well as global enterprises.

2) Our Experience and Past Successes

The ProjX configuration process is run by Black Belts who have worked with over 50 satisfied ProjX clients. These same experts use a train-the-trainer model to bring your best people up to speed on the application quickly, and enable them to train others in the organization. If you don't believe us, just call our customers. We will provide you with a list of references to contact in your industry and beyond.

3) BMG's Focus on Your ROI

We drive our success from your results. BMG is a global leader in performance excellence consulting, training and technology solutions. We help companies increase shareholder value and maximize profits by improving their operational efficiencies.
